

TEAM HUB

User Handbook

Everything you need to run projects, tasks, meetings, purchases and field communication in one place.

SZH Holdings · szholdings.com
For the Z1Power team · Version 1.0

What’s in here

Start with sections 1 and 2. Everything after that you can read when you need it.

1	Getting started	Signing in, finding your way around
2	The dashboard	Your daily view
3	Projects	Creating, editing, organising
4	Tasks	Assigning work and confirming it’s done
5	Meetings	Agendas, notes, and turning notes into tasks
6	Purchases	Requests and approvals
7	Text messages	Field crews texting into projects
8	Resources	Flyers, templates, knowledge base
9	The assistant	Asking questions in plain English
10	Permissions	Who can see and do what
11	For administrators	Roles, categories, audit, backups
12	Common questions	Quick answers

1 · Getting started

Signing in

Go to szhholdings.com. There are two ways in:

- 1 Sign in with Google** — use your company Google account. This is the easiest option and the one most of the team uses.
- 2 Email and password** — if you were sent an invitation link, you'll have set a password. Use that.

IF YOU CAN'T GET IN

After five failed attempts the system locks your account for 15 minutes. This protects everyone's data. Wait it out, or ask Yasir or Mohammad to help.

If Google says your account isn't recognised, it means your email address isn't on the team list yet — an administrator needs to add you first.

Finding your way around

Everything is reached from the sidebar on the left. On a phone, tap the menu icon at the top left, or use the tabs along the bottom.

WHERE	WHAT IT'S FOR
Dashboard	Your starting point — what needs attention, what the team has been doing
Tasks	Everything assigned to you, and what everyone else is carrying
Messages	Internal announcements and alerts
Meetings	Schedule meetings, write notes, turn notes into tasks
Texts	SMS from the field, filed against projects
Purchases	Request things and approve what others request
Assistant	Ask questions about projects in plain English
Categories	Jump straight to Solar & Battery, Data Centers, and so on
Resources	Flyers, spec sheets, templates, knowledge base
Trade shows	Conferences and events
Team	Who's who, contact details
Settings	Your preferences, and admin tools if you have them

SEARCH FROM ANYWHERE

Press **Cmd + K** (Mac) or **Ctrl + K** (Windows) to search projects, tasks and files without leaving what you're doing.

If something looks missing

You only see what you've been given access to. If a project, a budget figure, or a whole section isn't there, it's almost always a permission setting rather than a bug. Ask an administrator — see section 10.

2 • The dashboard

This is your home screen. It's built to answer two questions quickly: *what needs me today*, and *what has the team been doing*.

The four counters at the top

COUNTER	MEANING
Active	Projects with real movement — not sitting at 0%
Overdue	Tasks past their due date. If this isn't zero, start here.
Unowned	Projects with nobody assigned as lead. Unowned work doesn't move.
Total	Everything you can see

Portfolio

If you can see financials, this panel shows the money position across every project — total budget, committed, spent, and anything awaiting approval.

It deliberately leads with problems rather than totals:

- **OVER BUDGET** committed spend exceeds the budget
- **NEAR LIMIT** 90% or more of the budget is committed
- **SPENDING AHEAD OF PROGRESS** money is going out faster than the work is progressing — an early warning, not proof of a problem

Recent activity

Grouped by day, newest first. Every task completed, file uploaded, status changed, purchase raised or approved — across all your projects, in one list. This is the fastest way to catch up after a few days away.

Projects by category

Below that, projects are grouped — Solar & Battery, Data Centers, Certifications, International, and so on. Each card shows progress, who’s leading, priority and any overdue tasks.

Projects that haven’t started collapse into a single “+ N not started” tile so they don’t bury the ones that are moving. Click it to expand them.

EDIT WITHOUT LEAVING THE PAGE

Hover any project card and a small pencil appears. Click it to rename the project and set its priority (High / Medium / Low) right there. Press **Enter** to save, **Escape** to cancel.

3 · Projects

Creating one

Go to **Projects** and click **+ New Project**. Only the title and category are required — you can fill in the rest as things become clear.

FIELD	NOTES
Title	What everyone calls it. Keep it recognisable.
Category	Solar & Battery, Data Centers, Certifications, International, Other
Lead	The person responsible. Worth setting early — unowned projects stall.
Status	Planning, On Track, At Risk, Delayed, Complete
Progress	A percentage you set by hand. Keep it honest.
Budget	Estimated total. Drives everything in the Portfolio panel.
Site details	Address, city, state — useful for field crews

Project codes

Every project has a short code — **MEAD** , **CARSON** , **BRANSON** , **STRATEGY** . These are used when texting from the field (section 7) and on purchase records. They’re assigned automatically.

What’s on a project page

- **Talking points** — the current discussion items
- **Key dates** — milestones
- **Tasks** — who’s doing what, by when
- **Open questions** — things that need answers
- **Team access** — who can see and change what

- **Files** — drawings, permits, photos
- **Purchases** — requests raised against this project
- **Financials** — budget, committed, spent, line by line
- **Activity** — a full history of what's happened

Archiving vs deleting

ARCHIVE IS ALMOST ALWAYS WHAT YOU WANT

Archive hides a project from dashboards and lists but keeps every task, file, financial record and purchase. You can bring it back at any time.

DELETE CANNOT BE UNDONE

Delete permanently destroys the project and everything attached to it — tasks, files, financial records, purchases and history. There is no recovery. Only use it for something created by mistake.

Printing a project

Open a project and click **Download PDF**. You get a clean summary with the team, talking points, key dates, tasks (including who's assigned and whether work has been signed off) and financials. Good for client meetings and lenders.

4 • Tasks

The four views

VIEW	SHOWS
Mine	Tasks assigned to you. Start here.
Assigned	Tasks you created and gave to other people
Everyone	All tasks across projects you can see
Workload	How many open tasks each person is carrying — useful for spotting who's buried

Creating a task

From a project page, or from the Tasks page. Give it clear wording, assign one or more people, and set a due date if there is one. Everyone assigned gets a notification.

WRITE TASKS SOMEONE CAN ACT ON

“Order the 15-ton HVAC unit from Graybar” is a task. “HVAC” is not. The person reading it a week later needs to know exactly what to do.

Completing work

Tasks created from meeting notes need **two steps** — the person doing the work marks it done, then the project lead confirms it. This is deliberate: in a weekly meeting, “done” should mean someone checked.

- 1 **You finish the work.** Click **Mark done** and optionally add a note about what you did.
- 2 **The task shows** **AWAITING CONFIRMATION**. The project lead is notified.
- 3 **The lead confirms or sends it back.** If they send it back, they must give a reason, and the task reopens.
- 4 **Confirmed.** The task is closed and shows **CONFIRMED**.

Task conversations

Every task has a thread. If the lead sends work back, reply there. If you’re blocked, say so there. Everyone involved — assignees, the lead, anyone who has commented — gets notified. The full history stays with the task, so nothing gets lost in chat.

5 • Meetings

Before the meeting

Click **+ Schedule Meeting**. Add the title, date and time, a join link if it’s remote, agenda items, and who’s invited. Everyone invited gets a notification and can accept or decline.

During the meeting

Open the meeting and tick agenda items as you cover them. Everyone watching sees the same progress. A **Join** button appears next to any meeting with a link.

After the meeting — this is the useful part

Write your notes in the **Notes** section. They’re kept separate from the agenda so nothing gets overwritten, and they’re attributed and timestamped.

Meetings that have finished without notes are flagged **NOTES MISSING** so they don’t quietly get forgotten.

Turning notes into tasks

This saves the most time of anything in the system.

- 1 **Click + Import notes** at the top of the Meetings page.

- 2 **Either pull from a meeting you've already written up**, or paste notes or a full transcript into the box.
- 3 **Click Find action items.** The system reads through and pulls out what looks like commitments, along with who they belong to and any deadlines.
- 4 **Review every suggestion.** Edit the wording, change who's assigned, adjust dates, untick anything that isn't really a task. *Nothing is created until you confirm.*
- 5 **Click Create tasks.** Everyone assigned is notified, and the tasks require lead sign-off when completed.

What it recognises

Notes in almost any format work. All of these are picked up:

- Ryan will order the HVAC unit by Friday
- Action: Muhammad - confirm 208V service is live
- - [] Ali to pull B200 pricing by Sept 1
- Sections headed ### @Zakir with checkbox items underneath
- Transcripts with timestamps and speaker names

It knows the team's alternate spellings — Zakir is Syed, Javed is Javaid, Muhammad and Mohamed are Mohammad, Yasser is Yasir.

TWO LABELS ON EACH SUGGESTION

RULE means it matched a clear pattern in your notes. **AI** means the assistant inferred it. Both are worth reviewing, but AI suggestions especially — they're useful for messy transcripts but can occasionally misread intent.

6 • Purchases

Anything the company buys — materials for a project, trade show passes, marketing, software, travel — goes through here.

Raising a request

- 1 **Purchases → + New purchase request.**
- 2 **Pick a category.** Material and Subcontractor *must* be attached to a project — that's how spend gets tracked against budgets.
- 3 **Fill in vendor, quantity and unit cost.** The total calculates itself.
- 4 **Submit for approval.** Everyone who can approve is notified.

Who approves what

AMOUNT	WHO CAN APPROVE
Up to \$500	The project lead or owner
Up to \$25,000	Anyone with approval permission
Over \$25,000	An administrator
Over \$25,000	Plus a second, different approver

YOU CANNOT APPROVE YOUR OWN REQUEST

This applies to everyone, including administrators. If you raise it, someone else signs it off. It protects you as much as the company — an approval trail where the requester never signed their own request is what an auditor or investor wants to see.

What an approver sees

Before approving, the budget impact is shown in plain terms:

Mead Data Center — budget \$353,000 · committed \$340,000
This request adds \$2,400 → committed becomes **\$342,400 (97%)**

If it would push the project over budget, that appears in red with the overage amount. The point is to approve a decision, not just a number.

After approval

An approved purchase automatically becomes a **committed line item** on the project’s financial ledger. You don’t need to enter it twice.

From there it moves through **Ordered → Received → Invoiced → Paid**. When it’s marked invoiced, the committed amount becomes real spend on the project.

Cancelling a purchase releases the committed budget back to the project.

7 • Text messages

Field crews and approved subcontractors can text a ZIpower number, and their messages file themselves against the right project.

SETUP IN PROGRESS

Text messaging requires carrier registration (a US requirement for all business SMS, not something specific to us). Until that clears, this section describes how it will work rather than what's live today.

Only approved numbers work

Everyone on the team is automatically approved — your number from the Team page is enough. Outside numbers (subs, vendors, inspectors) must be added by an administrator on the Texts page. Anything else is rejected.

How a text finds the right project

- 1 Use the project code.** Text `MEAD: concrete poured, forms stripped` and it files to that project. This always works.
- 2 Or just keep texting.** After your first message about a project, follow-ups go to the same place for the next 8 hours. No prefix needed.
- 3 Or answer the question.** If it can't tell, it texts back a numbered list. Reply with a digit and your original message files correctly.

What you can text

TEXT THIS	WHAT HAPPENS
<code>MEAD: your note</code>	Files a note against that project
<code>TASKS</code>	Texts back your open tasks
<code>DONE</code>	Completes the task you were last told about
A photo	Lands in that project's Files
<code>HELP</code>	Lists the commands
<code>STOP</code>	Opts you out of all messages

8 • Resources

The shared library — marketing flyers, spec sheets, templates, certifications and the knowledge base.

Two kinds of thing live here:

- **Files** you upload — flyers, datasheets, PDFs
- **Links** to something hosted elsewhere — a shared doc, a vendor page

Search across titles, tags and descriptions. Filter by category. If you have permission you can add your own categories.

9 · The assistant

Ask questions in plain English instead of hunting through pages.

Things worth asking

- “What needs my attention today?”
- “Which projects are over budget?”
- “Summarise the Mead data center project”
- “What did we decide in the last meeting?”
- “Who’s carrying the most tasks right now?”

It also answers general questions — technical, industry, drafting help — not just things about your projects.

IT ONLY SEES WHAT YOU CAN SEE

The assistant is given exactly the data your permissions allow. If you can’t see a project’s budget in the app, the assistant doesn’t have that number either — no matter how the question is phrased.

CHECK BEFORE ACTING

It can misread things. For anything that matters — a figure you’re about to quote, a date you’re about to commit to — confirm it on the actual project page first.

10 · Permissions

Access works on two levels, and both apply.

Your role

Sets what you can do generally — create projects, approve purchases, manage the team, see the audit log.

ROLE	ROUGHLY
Administrator	Everything, including backups and financial corrections
Sub-Admin	Nearly everything except restoring backups
Supervisor	Manage meetings, resources and approve purchases
Project Lead	Run their own projects, request purchases
Member	View and work on what they’re given

Per-project access

On top of your role, each project can grant you specific rights — view, edit tasks, upload files, see financials, edit financials, change status, and so on. This is why you might see full details on one project and only the basics on another.

IF SOMETHING IS MISSING

It's a permission setting, not a fault. Ask Yasir or Mohammad and they can grant it in seconds.

11 • For administrators

Roles and permissions

Settings → Manage Roles. Create roles and tick exactly what each can do. Roles work best as job functions several people share — “Project Lead” rather than one role per person.

Categories

Settings → Manage Categories. Create, rename, recolour or remove them. Renaming moves every project at the same time — nothing gets orphaned. A category can't be deleted until you say where its projects should go.

Audit and integrity

Settings → Audit & Integrity. Three tools:

- **Activity log** — every change, who made it, before and after values. It cannot be edited or deleted by anyone.
- **Financial integrity check** — recomputes each project's committed and actual spend from its line items and reports any drift. Running the check changes nothing; you decide whether to apply corrections.
- **Backup restore** — upload a backup file and see exactly what it would add before anything happens. It only adds missing records; it never overwrites or deletes.

WORTH DOING MONTHLY

Download a backup from Settings, and run the financial integrity check. Both take under a minute and both are the kind of thing you only miss when it's too late.

12 • Common questions

I can't see a project I know exists.

You haven't been given access. Ask an administrator.

Where did the budget figures go?

Financial visibility is set per project. You have access to the project but not its financials.

I marked a task done but it still shows as open.

Tasks from meeting notes need the project lead to confirm. It's waiting on them.

My purchase is still pending.

Someone other than you needs to approve it, and over \$25,000 needs an administrator plus a second approver.

I deleted something by mistake.

If it was *archived*, an administrator can restore it. If it was *deleted*, it's gone — which is why archiving is the default.

The assistant gave me a wrong answer.

It can misread things, and it only sees what your permissions allow. Check the project page directly for anything important.

Someone left the company.

An administrator removes them from Team. Their past work, comments and approvals stay intact — history isn't rewritten when someone leaves.

Can I use this on my phone?

Yes. Everything works on a phone. Tap the menu at the top left, or use the bottom tabs.

NEED HELP?

Ask Yasir Jahangir or Mohammad Siddiki. If something looks broken rather than permission-related, tell them what you were doing when it happened — errors are logged automatically and that context makes them much faster to find.
